

MIMAKI PRO SERIES TEXTILE PRINTERS

Tune your Textile Printer to your specific requirements. With an enviable standard configuration, the Tiger is ready to roar from the start. Build in feeding, winding and post processing options and the possibility to customise to suit your printing needs.

HEAVY SOLID MACHINE FRAME

The steel frame is assembled with bolts and lock-nuts. This results in a very stable and solid frame, supporting high precision dot placement to the finest quality. Even at the fastest throughput speeds and high-volume 24/7 production, year after year.

HIGH STABILITY AND RELIABILITY

The Mimaki Pro Series textile printers feature multiple innovative technologies that ensure the printer operates in a stable and reliable fashion, reducing downtime and wastage.

ADVANCED WIPER AND HEAD CLEANING

Revolutionary ink-wiping takes the challenge of printing multiple fabrics at high speed in its stride. Individual wipers are installed for each print head to avoid colour mixing and increase cleaning speed. These wipers are automatically sprayed prior to and after cleaning which reduces daily maintenance and helps to prevent nozzle failure.

WRINKLE AND MEDIA JAM SENSORS

The fabric path is optimised to safeguard against feeding, printing and winding issues, utilising a sticky belt in combination with a wrinkle sensor that avoids head strikes.

PRINT ON TRANSFER PAPER OR DIRECT TO TEXTILE

The direct to textile version comes with a huge choice of additional options. The sublimation version benefits from stable printing on light weight paper.
